

ELEMENT
GAS FIRES

WORLD LEADING ELEGANCE

Let yourself be seduced by Element4

DISCOVER OUR INNOVATIVE, WORLD- CLASS DESIGN FIREPLACES!

Are you looking for a gas fireplace to compliment your interior? Or even better: a gas fireplace that is an eye-catcher in your home or office building? Then choose a gas fireplace from Element4, a design fireplace made in the Netherlands, created by design enthusiasts and people with a passion for technology, just like you...

*A fireplace that fits you
perfectly*

Are you someone who always wants the best? Who gets enthusiastic about products that distinguish themselves from the majority? Then a gas fireplace from Element4 is the right choice for you. Our design team consists of discerning people with passion for design, knowledge of the latest trends and love for special products. You can see that in the end result: a very stylish fireplace that demonstrates the difference between "a beautiful fireplace" and also "contemporary design piece."

DUTCH COMMON SENSE WITH GLOBAL ALLURE

Element4 is a top Dutch brand. We work practically and pragmatically, but with a strong focus on design. This ensures that our fireplaces are loved around the world by designers, architects and trend-conscious consumers. As real 'Dutchies', technology is an important issue for us. Our fireplaces have the most advanced technical features: they are efficient, can be controlled remotely and have an adjustable flame picture. This makes us a real trend-setter on the international market.

BURNERS

Next to the fireplace of your choice it is always indicated what type of burner is suitable for this fireplace. These burners differ greatly from each other, but at the same time have one important similarity: they come standard with beautiful glowing logs. With this you can enjoy the most beautiful fire at a low setting!

Enjoy the most beautiful fire at a low setting!

SINGLE BURNER

The single burner allows for a minimum installation depth of the fireplace and contributes to low consumption. Despite its modest appearance, it has a surprisingly big effect: full, lively flames with a realistic fireplace experience as a result.

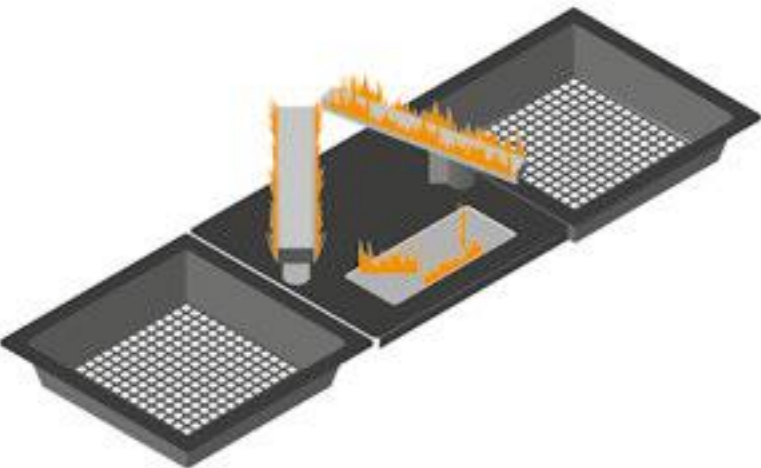

DOUBLE BURNER

The double burner guarantees a beautiful fire experience because the fire is spread over the full depth of the fireplace. In addition, you can easily switch off one of the burners for optimum control of the heat and the flame picture.

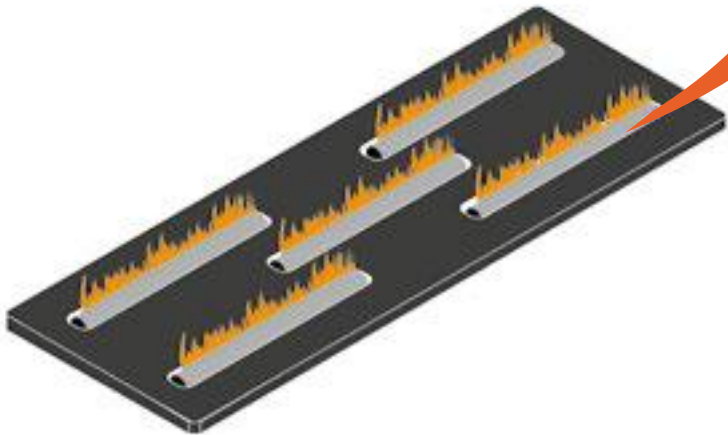

MULTI BURNER

With no less than three burners, you benefit from even more beautiful and intense flames. You can switch off the burners left and right. This way you regulate the flame picture and the heat yourself.

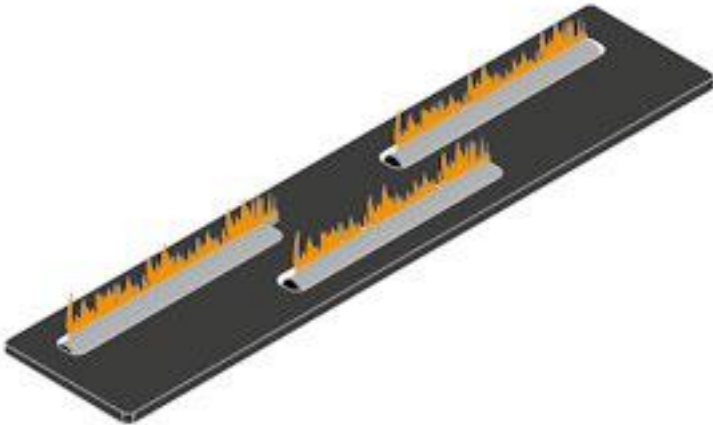

QUAD BURNER

The Quad Burner has five different burners. This way you can endlessly adjust the flames and the heat intensity. Thanks to the large number of burners, it is possible to create a lot of heat in a short time. At the same time you enjoy an impressive flame picture. Want to switch to low power? Then simply switch off a number of burners with the touch of a button.

REAL FLAME BURNER

With the Real Flame burner you are assured of an extremely realistic fire image. The special LED lighting effect on the fire surface provides a natural look. The flames, in combination with the realistic logs, create an utterly realist wood fire look.

WE PROUDLY PRESENT TO YOU:

THE MOST BEAUTIFUL FIRE AT A LOW SETTING

At Element4 we see it as a challenge to get the most out of our fireplaces. Our aim? Creating a lovely ambiance with a flame picture, regardless of the power on which the gas fireplace is running. Now you can enjoy a beautiful fire, even with the lowest possible gas consumption. It is no coincidence that we dare to say that a gas fireplace from Element4 "has the most beautiful fire at a low setting".

SAVE ROOM THANKS TO THE MINIMAL INSTALLATION DEPTH

Do you have limited amount of space available or do you want a gas fireplace that is as flat as possible to meet your design needs? Then an Element4 fireplace is the right choice for you. Our gas fireplaces are already feasible with an installation depth of only 25 cm. This is ideal if you have a narrow room or if you also want to install a mantel. Moreover, many designers and architects opt for our shallow fireplaces because of the spatial effect they have on the interior.

DIGITAL CONTROL

PRO CONTROL

Want to easily control your gas fireplace from your smart phone or your tablet? This is possible with ProControl from Element4. ProControl is the perfect choice if you want to control your fireplace remotely, without the use of a home automation system. All you need is the supplied Element4 Wi-Fi box. The rest is already present in your fireplace and in the user-friendly ProControl app that you install on your smartphone or tablet. It could not be easier!

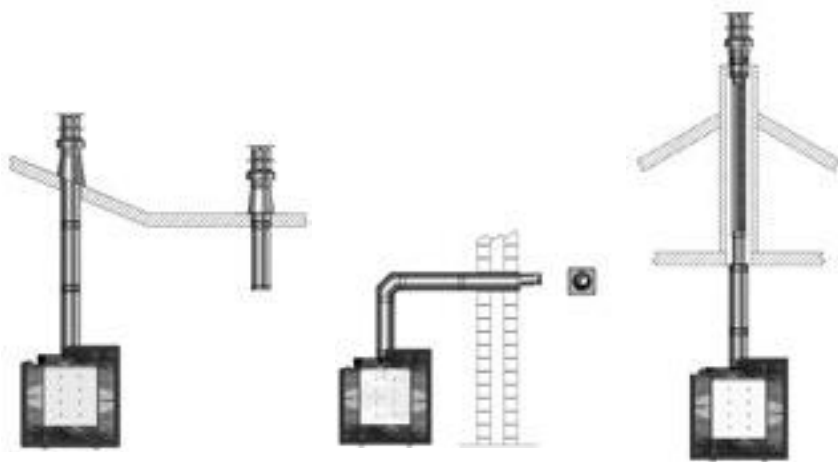

DOMOTICA

Do you want to control your Element4 gas fireplace with your existing home automation system? It's possible! Using home automation you can switch the gas fireplace on and off, turn it up or down and control the double burner. The installation is simple: you connect an Element4 home automation cable to the receiver of your gas fireplace and connect it to your home automation system. The rest speaks for itself. And if you cannot get it to work, your nearest dealer is always there to help you.

DISCOVER THE ADVANTAGES OF OUR CLOSED SYSTEM

The gas fireplaces from Element4 work with a closed system. This means that the fireplace is not open to the room, but is completely enclosed. The fresh air and the flue gases run through the same, double-walled pipe that is connected to the outside air. What is the big advantage of a closed system? The flames are always behind the glass. This is safer and ensures heat retention in the balanced Flued system, with a higher convection heat and pleasantly warm room as a result. In addition, the supplied cold outside air is already preheated by the double-walled pipe. This ensures a greater return on your gas fireplace.

WITH THE POWERFAN YOU CAN ENJOY A GAS FIREPLACE ANYWHERE

Want to install your gas fireplace in a place where there is no room for an exhaust pipe? You can do it with the Powerfan. This smart solution makes it possible to create a carry-over of no less than 36 meters within the flue. This allows you to install your gas fireplace in places where it previously was not possible. And the handy thing is: the device itself regulates the correct settings for the supply and removal of air.

BACK WALLS

Element4 offers the possibility of choosing the back wall that best suits your interior. From a back wall in black steel, black glass or roof tile motif – the choice is completely up to you.

The options vary depending on the type of fireplace, thus check to see if the back wall you want is suitable for your fireplace. We offer the following styles and designs:

BLACK STEEL

BLACK GLASS

ROOF TILE MOTIF

Choose your own style!

ANTI-REFLECTIVE GLASS

Want to enjoy an even more beautiful flame picture, so that it seems like you are looking straight into the fire? Have your fireplace specified with anti-reflective glass. This glass prevents annoying glare from incident light rays and is virtually invisible. Even when the fireplace is turned off, you cannot see the glass. This allows you to benefit from the best of both worlds: the convenience and comfort of a closed fireplace, with the atmosphere and flames of a real fireplace.

View the technical overview on page 96 to see which fireplaces can be specified with anti-reflective glass.

FUEL BEDS

Your Element4 gas fireplace comes standard with gas logs. These realistic gas logs consist of smaller and larger branches made of ceramic, which are specially made for use in the gas fireplace. You can also choose other materials such as: white Carrara pebbles, white stones or grey stones.

The choices vary depending on the type of fireplace, do check carefully which type of fuel bed is available with your fireplace.

GAS LOGS

GAS LOGS

WHITE STONES

GREY STONES

YOUR FIREPLACE IS COMPLETE WITH THE RIGHT ACCESSORIES

- 1 SERVICE HATCH**
 Do you have a gas fireplace without a frame? Then you need a service hatch for mounting the gas control block. The service hatch has an installation size of 250 mm x 175 mm (H x W) and is designed to be sleek and stylish. This way you are assured of an optimal match with the chimney breast.
- 2 WALL SWITCH**
 With a stylish switch on the wall, you can easily switch your gas fireplace on or off. You can also control the temperature with a touch of a button. It's a simple solution that is very easy to use.
- 3 REMOTE CONTROL**
 Our remote control features the E-Save control system. This allows you to switch the fireplace on and off remotely and to select different burner and temperature settings. Thus you save at least 40% on gas.
- 4 VENTILATION GRILLS**
 It is important that the chimney breast of your gas fireplace is well ventilated. You do this by placing ventilation grill on the sides of the chimney breast. This prevents high temperatures in the chimney breast and any cracks in the stucco. In addition, you benefit from optimal heat dissipation. The ventilation grill has an installation dimension of 231 mm x 43 mm (H x W) and has a high level of finish.

PRODUCTS

Looking for a contemporary and stylish gas fireplace that highlights your interior?

Discover our versatile gas fireplace collection. From front-view and see-through fireplaces to room dividers and 3-sided fireplaces, with a gas fireplace from Element4 you are guaranteed to get optimal user-friendliness and fabulous design. Our gas fireplaces are easy to maintain and have a minimal installation depth starting at just 25 centimeters. This saves you valuable space. In addition, you benefit from the most beautiful fire at a low setting.

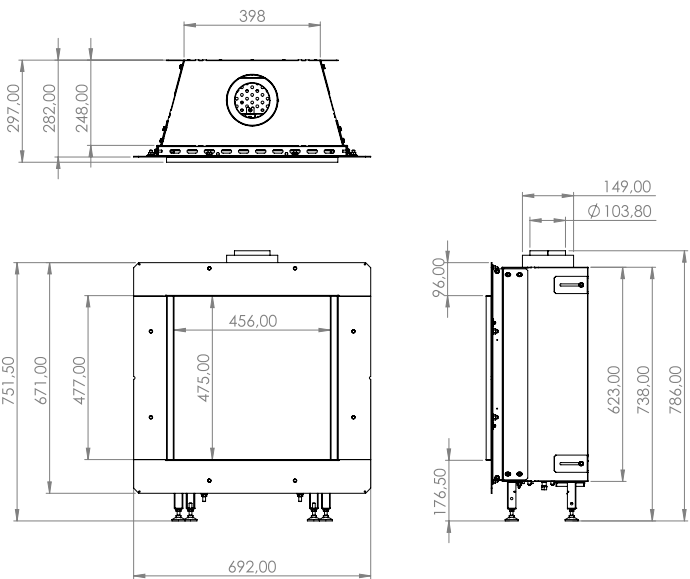

Introduction

FRONT-VIEW FIREPLACES

The front-view fireplace is a true classic among gas fireplaces. This type of fireplace has one glass plate and offers a beautiful view of the fire. You can easily install a front-view fireplace in a mantel or matching casing. Did you know that with an Element4 fireplace you only need 25 centimeters of installation depth? This way you make optimum use of the (limited) space. Be inspired by our collection and discover which type of fireplace is right for you.

Introduction

SEE-THROUGH FIREPLACES

Would you prefer a see-through fireplace? Then you are choosing a beautiful eye-catcher. You place this type of gas fireplace in a wall, so that the fire is visible on both sides. This creates a special spatial effect. Moreover, a see-through fireplace creates an open connection between two rooms, allowing you to enjoy an atmospheric fire in two places at the same time. This is the perfect choice if you are looking for a gas fireplace with an optimal spatial experience.
